DETAILED ACTION

EXAMINER'S AMENDMENT

1. The following is an Examiner's statement of reasons for the indication of allowable subject matter: The prior art of record does not disclose, make obvious, or otherwise suggest the structure of the applicant's prediction program, prediction apparatus, and prediction method together with the other limitations of the independent claims.

The dependent claims being further limiting and definite are also allowable. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably **accompany** the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Authorization for this examiner's amendment was given in an interview with Jeffrey Brill on December 6, 2006.

AMENDMENT TO THE CLAIMS:

Claim 11 has been amended. Claims 10-14, 16-24, and 35-38 remain pending in the application.

WHAT IS CLAIMED IS:

11. (Currently Amended) The method of claim 10, wherein said directory entries ~~can be~~ are stored at any underlying physical location.

Reasons for Allowance

2. Claims 10-14, 16-24, and 35-38 are allowed.

3. The following is a statement of reasons for the indication of allowable subject matter: the prior arts of records, neither anticipates nor renders obvious the following limitations as claimed:

As to claim 10, the prior art of records fail to anticipate or suggest in a directory server containing heterogeneous directory entries and a directory views hierarchy, each view containing a filter describing the view, a method of searching the view in the directory views hierarchy with a given filter, comprising the steps of:

(a) collecting filters from said view and all ancestor views of said view to form a first sub-filter;

rewriting the given filter using said first sub-filter to be a sub-tree search of the parent of the topmost view in the view hierarchy; and

performing the sub-tree search with the rewritten filter;

wherein each of the directory views belongs to a specific object class that contains a filter attribute, the filter attribute containing a filter that describes the directory views, together with the other limitations of the independent claims.

As to claims 35 and 37, the prior art of records fail to anticipate or suggest in a directory server containing heterogeneous directory entries, a method of hierarchically navigating said entries comprising the steps of:

creating one or more directory views;

organizing said directory views into a hierarchy, wherein said step of organizing uses only information concerning said entries, wherein each of said directory views belongs to a specific object class that contains a filter attribute, said filter attribute containing a filter that describes said directory view;

collecting filters from said directory views and all ancestor views of said directory views to form a first sub-filter; and

using one of said directory views for navigating to said entries, together with the other limitations of the independent claims.
